WPI; 2002-114578/15. P-PSDB; AAU12009. DNA construct for producing enzymatically-inactive proteolytic tryptase, comprises DNA sequence encoding proteolytic tryptase having an active site mutation.

Claim 7; Page 83-84; 126pp; English.

The present invention relates to recombinant human proteolytic tryptases, active site mutants of these tryptases and the methods for producing these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a NAA sequence encoding a proteolytic tryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity due to the active site mutation, in hosts transformed to contain the construct). The method is useful for producing enzymatically-active beta-II tryptase. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            009
active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its enzymatic activity, and for modelling studies. The enzymatically-active, recombinant proteolytic tryptase produced are useful as an antigen to openerate anti-human tryptase antibodies and in drug screening for compounds which act as tryptase inhibitors, antagonists, agonists, etc. AAS207775-AAS20790 encode for recombinant human beta-II tryptase active
                                                                                                                                                                                                                                                                                                                120
                                                                                                                                                                                                                                                                                                                                                                               180

The present invention relates to recombinant human proteolytic tryptases, active site mutants of these tryptases and the methods for producing these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a DNA sequence encoding a proteolytic tryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity due to the active site mutation, in hosts transformed to contain the construct). The active site mutants of producing enzymatically-active beta-II tryptase. The active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its enzymatic activity, and for modelling studies. The enzymatically-active, croembinant proteolytic tryptase produced are useful as an antigen to generate anti-human tryptase antibodies and in drug screening for compounds which act as tryptase inhibitors, antagonists, agonists, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GCCCTCAGGGTGCAACTGCGGGAGCACCTCTACTACCAGGACCAGCTGCTGCCGGTC 240

This sequence encodes the human beta-tryptase. The invention relates to

```
DNA expression construct comprising (5' to 3') a promoter linked to a signal sequence which is linked to a sequence encoding human beta-tryptase. The DNA construct is useful for transforming host cells to express, post translationally process and secrete enzymatically active human tryptase. The method is useful for the production of large amounts of tryptase with defined specifications. The transformant is useful for pharmacological studies, combinatorial library screens and X ray crystallographic studies. The tryptase produced allows for the acvelopment of tryptase agonists and/or antagonists, is useful as an antagonists, as useful as an antagonists, agonists etc. and to assay for the presence of tryptase in antagonists, agonists etc. and to assay for the presence of tryptase in biological or other solutions. Tryptase inhibitors, antagonists, agonists etc. and to assay for the presence of tryptase in biological or other solutions. Tryptase inhibitors, antagonists, agonists etc. and to assay for the presence of tryptase in biological or other solutions. Tryptase inhibitors, antagonists, and initiate tryptase activity and it has enzymatic activity which compares favourably with cadaveric tryptase. The availability of enzymatically continued for specific tryptase scale screening of combinatorial libraries for specific tryptase inhibitors as potential therapeutics and advances the understanding of the biological significance of tryptase in and advances the understanding of the biological significance of tryptase in and advances the understanding of the biological significance of tryptase in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            0

The present invention relates to recombinant human proteolytic tryptases, active site mutants of these tryptases and the methods for producing active site mutants of these tryptases and the methods for producing chase. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a DNA sequence encoding a proteolytic tryptase that lacks enzymatic activity due to the a mature proteolytic tryptase that lacks enzymatic activity due to the active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its encompliant proteolytic tryptase produced are useful as an antigen to generate anti-human tryptase produced are useful as an antigen to generate anti-human tryptase antibitors, antagonists, agonists, etc.

The present sequence encodes for recombinant human beta-II tryptase

                                                                                                                                                                                                                                                                                                                                         임
                                                                                                                                                                                                                                                                                                                                                                                                                                     The present intended to the control numan proteonyric cryptases, active site mutants of these tryptases and the methods for producing these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a DNA sequence encoding a proteolytic tryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity due to the active site mutation, in hosts transformed to contain the construct). The method is useful for producing enzymatically-active beta-II tryptase. The active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its enzymatic activity, and for modelling studies. The enzymatically-active, generate anti-human tryptase produced are useful as an antigen to generate anti-human tryptase entibodies and in drug screening for compounds which act as tryptase inhibitors, antagonists, agonists, etc.

The present sequence encodes for human beta-I tryptase

The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a NA sequence encoding a proteolytic tryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity due to the active site mutation, in hosts transformed to contain the construct). The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DNA construct for producing enzymatically-inactive proteolytic tryptase, comprises DNA sequence encoding proteolytic tryptase having an active

method is useful for producing enzymatically-active beta-II tryptase. The active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its enzymatic activity, and for modelling studies. The enzymatically-active, recombinant proteolytic tryptase produced are useful as an antigen to compounds which act as tryptase antibodies and indus screening for compounds which act as tryptase inhibitors, antagonists, agonists, etc. AAS20775-AAS20790 encode for recombinant human beta-II tryptase active

The present invention relates to recombinant human proteolytic tryptases, active site mutants of these tryptases and the methods for producing these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a box sequence encoding a proteolytic tryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity due to the active site mutation, in hosts transformed to contain the construct). The active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its tecombinant proteolytic tryptase produced are useful as an antigen to generate anti-human tryptase antibodies and in drug screening for compounds which act as tryptase inhibitors, antagonists, agonists, etc.

AAS20775-AAS20790 encode for recombinant human beta-II tryptase active
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120

```

DNA construct for producing enzymatically-inactive proteclytic tryptase, comprises DNA sequence encoding proteclytic tryptase having an active site mutation.

Claim 7; Page 91-92; 126pp; English.

```
The present invention relates to recombinant human proteolytic tryptases, active site mutants of these tryptases and the methods for producing active site mutants of these tryptases and the methods for producing comprising a promoter operably linked to a secretion signal sequence which is operably linked to a secretion signal sequence tryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity due to the active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its enzymatic activity, and for modelling studies. The enzymatically-active, recombinant proteolytic tryptase produced are useful as an antigen to generate anti-human tryptase produced are useful as an antigen to generate anti-human tryptase inlibitors, antagonists, agonists, etc.

ANSIONTS-AASION90 encode for recombinant human beta-II tryptase active

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to recombinant human proteolytic tryptases, active site mutants of these tryptases and the methods for producing active site mutants of these tryptases and the methods for producing comprising a promoter operably linked to a secretion signal sequence which is operably linked to a DNA sequence encoding a proteolytic tryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity due to the active site mutants of proteolytic tryptase provide a tool to investigate active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its cardymatic activity, and for modelling studies. The enzymatically-active, recombinant proteolytic tryptase produced are useful as an antigen to generate anti-human tryptase antibodies and in drug screening for compounds which act as tryptase inhibitors, ancagonists, agonists, ancipve AAS20775-AAS20790 encode for recombinant human beta-II tryptase active
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ó

DNA construct for producing enzymatically-inactive proteolytic tryptase, comprises DNA sequence encoding proteolytic tryptase having an active site mutation. Claim 7; Page 113-114; 126pp; English. WPI; 2002-114578/15. P-PSDB; AAU12020.

The present invention relates to recombinant human proteolytic tryptases, active site mutants of these tryptases and the methods for producing these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a DNA sequence encoding a proteolytic cryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity due to the active site mutants of proteolytic tryptase provide a tool to investigate active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its croombinant proteolytic tryptase produced are useful as an antigen to generate anti-human tryptase antibodies and in drug screening for compounds which act as tryptase inhibitors, antagonists, agonists, etc.

DNA construct for producing enzymatically-inactive proteolytic tryptase,

comprises DNA sequence encoding proteolytic tryptase having an active

Claim 7; Page 110-111; 126pp; English.

The present invention relates to recombinant human proteolytic tryptases, active site mutants of these tryptases and the methods for producing these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a DNA sequence encoding a proteolytic tryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity due to the method is useful for producing enzymatically-active beta-II tryptase. The active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its enzymatic activity, and for modelling studies. The enzymatically-active, recombinant proteolytic tryptase produced are useful as an antigen to generate anti-human tryptase antibodies and in drug screening for compounds which act as tryptase inhibitors, antagonists, agonists, etc. AAS20775-AAS20790 encode for recombinant human beta-II tryptase active site mutants

a mature protectly tryptese that lacks enzymatic activity due to the active site mutation, in hosts transformed to contain the construct). The method is useful for producing enzymatically-active beta-II tryptase. The active site mutants of protecolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its enzymatic activity, and for modelling studies. The enzymatically-active, recombinant protecolytic tryptase produced are useful as an antigen to generate anti-human tryptase antibodies and in drug screening for compounds which act as tryptase inhibitors, antegonists, agonists, etc. AAS20775-AAS20790 encode for recombinant human beta-II tryptase active
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      198
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       258

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             378
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to recombinant human proteolytic tryptases, active site mutants of these tryptases and the methods for producing chase. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a BNA sequence encoding a proteolytic tryptase with an active site mutation (the construct drives expression of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     438

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 259                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        379
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               361                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          g
